Mobile networks performance in Burkina Faso January 2021

About SpeedChecker

Since 2008 we have helped millions of users get a better understanding of how to make their Internet go faster. Our solutions empower mobile and fixed operators, regulators and researchers in making their Internet infrastructure better and more available for everyone.

We do that by providing end-users tools such as websites or mobile apps and offer crowdsourcing systems and data to the businesses and organizations.

We collect real world end user experience through our passive and active measurement technology, combined with unique regional and global partnerships with thousands of apps.

More about SpeedChecker here

About the data

Total number of samples: 70,384

Total number of unique devices: 9,077

Data collection period: 11 January - 31 January 2021

MNO speed benchmark

Onatel	—— 95% Confidence interval
Download speed (Mb/s)	12.97
Upload speed (Mb/s)	4.79
Orange	
Download speed (Mb/s)	7.58
Upload speed (Mb/s)	3.29
Telecel	
Download speed (Mb/s)	7.22
Upload speed (Mb/s)	2.76

MNO 4G and 3G download speed benchmark

Onatel		95% Confidence interval
4G Download speed (Mb/s)		14.02
3G Download speed (Mb/s)	4.42	
Orange		
4G Download speed (Mb/s)	7.83	
3G Download speed (Mb/s)	4.14	
Telecel		
4G Download speed (Mb/s)	7.65	
3G Download speed (Mb/s)	2.98 -	

MNO latency benchmark

Onatel		95% Confidence interval
Latency (ms)	150.97	<u> </u>
Orange		
Latency (ms)	154.39	
Telecel		
Latency (ms)	175.38	

MNO 4G Availability benchmark

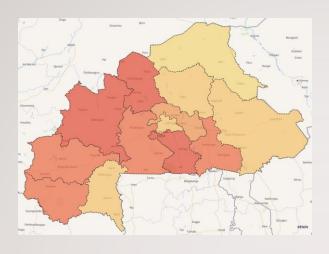

4G availability is calculated based on all the measurements within this report. This percentage does not reflect the actual 4G coverage in Burkina Faso. Telecel has limited coverage but within the limited coverage is leading the 4G availability.

Onatel	
4G availability (%)	87.75
Orange	
4G availability (%)	87.59
Telecel	
4G availability (%)	88.62

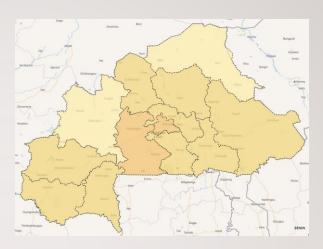

Regional comparison of MNO download speed performance

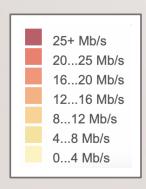

Onatel

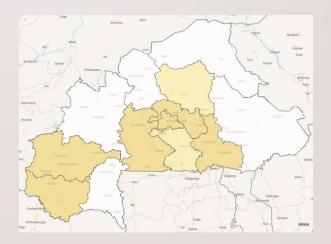

Orange

Telecel

Following table shows average download speeds in different regions of Burkina Faso. The 2nd column is an average of all MNOs in a particular region.

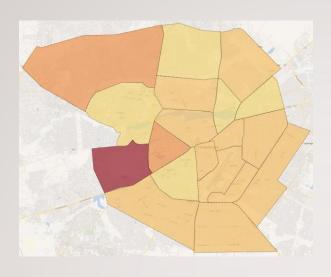

The fastest regions are at the top of the table.

District	All operators	Onatel	Orange	Telecel	Test count #
Centre-Sud	14.5	20.49	7.68	2.17	1100
Centre-Est	13.01	17.33	5.16	5.66	2353
Centre-Ouest	10.99	18.2	8.61	5.7	1761
Haut-Bassins	9.92	16.77	6.88	5.13	11585
Cascades	9.68	16.16	6.94	4.04	1625
Plateau-Central	9.46	15.06	6.82	4.61	697
Centre	9.16	10.96	8.65	7.55	41816
Boucle du Mouhoun	8.36	22.1	2.75		1221
Nord	8.31	21.35	5.62		1727
Est	8.14	10.86	4.42		1554
Centre-Nord	8.05	10.47	5.02	3.82	2347
Sud-Ouest	7.24	11.16	4.3		957
Sahel	4.67	6.21	3.45	8.66	1586

Ghana	83.33

ARE YOU LOOKING FOR MORE DETAILED CROWDSOURCED DATA IN BURKINA FASO?

What you see in this free report is a high-level snapshot of the crowdsourced data we offer to our clients. Our crowdsourcing system contains billions of data points collected from mobile devices worldwide. Unlike our competitors, we can sell access to the data with different granularity: Our clients can pick data they need with significant cost savings associated with a reduced scope.

Flexibility is in our DNA

Our customers value our flexible and modular approach in delivering our solutions. There is no one size fits all in providing crowdsourcing projects. Customers increasingly require tailored solutions which will satisfy all technical, operational and legal requirements.

With reduced scope comes reduced price. Our Basic KPI set is a more cost effective way to get speed test data. Our Advanced KPI set is more comprehensive with 100+ active and passive KPIs.

Crowdsourcing is about trade-offs. Do you want more tests or do you want tests to run longer? Do you want to collect data passively without impacting the network and user bandwidth or run active tests which will stress and assess the capacity better?

Do you want us to host the solution for fast & easy deployment or require data to be within your data center for compliance reasons.

You not only want the data but you also want your own app or web-based tester? We can do it all. Our team can produce iOS, Android, HTML, Windows and MAC clients tailored to your specific needs.

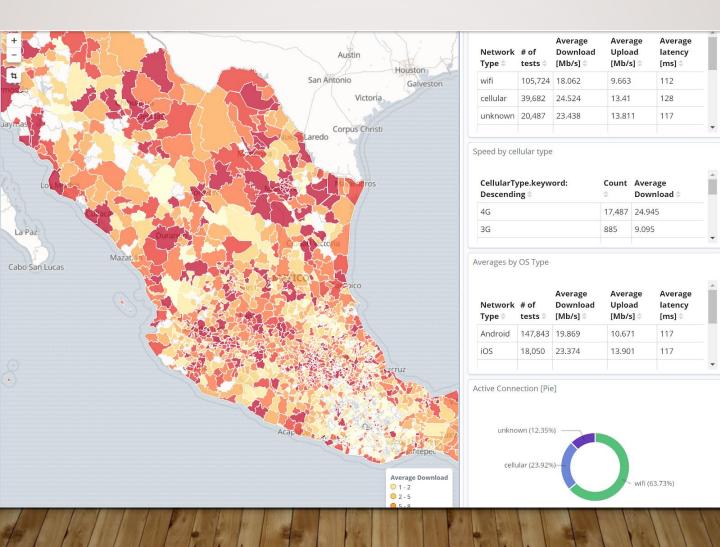

CONTACT US FOR MORE INFORMATION

Basic Crowdsourcing System

System offers full analytical options like our Advanced system but with the limitation of a smaller Basic KPI set. Basic KPIs include speed test data along with device and network information but do not contain detailed Radio KPIs nor passive measurements.

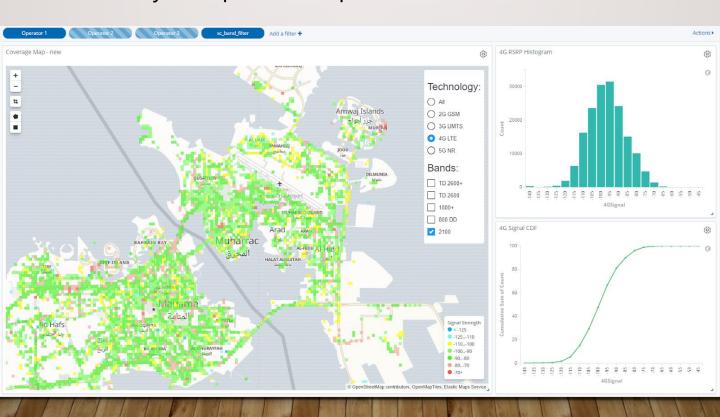

Step up from our Basic system to our Advanced Crowdsourcing system with more than 100+ KPIs to analyse

Coverage Analysis Dashboard

- Statistical research on basis of millions of crowdsourced samples
- ✓ Multiple signal metrics RSRP, RSRQ, SNR, RSSI, CQI
- ✓ Split by MNO, Radio Access Type, Band (down to individual ARFCN)
- ✓ Possibility to filter by: speed (e.g. High-Speed Train Scenarios)
- ✓ Possibility to separate samples between Indoor/Outdoor

				1,016	1,191		

Cellular Data Usage Dashboard

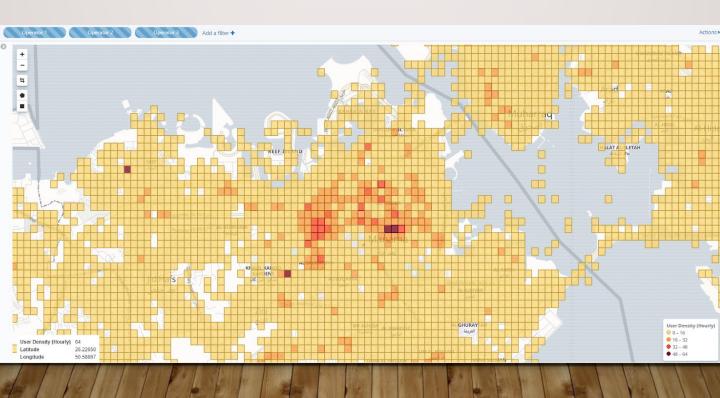

The Cellular Data Usage dashboard shows the locations with the highest traffic demands to suggest to the operators which areas would benefit from additional investment or where network expansion might be required.

User Density Map

The User Density Map shows the locations with the highest subscriber density to suggest to the operators the areas where additional investments into network expansion might be required.

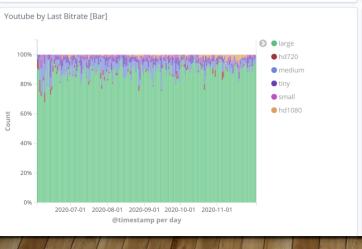

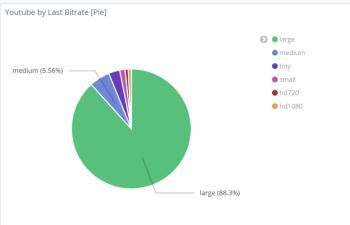

Video Experience dashboard

Streaming video apps such as YouTube or Netflix are being increasingly used by consumers who expect the best video quality with low start-up time and no rebufferings. Our data can contain metrics such as video download speed, streaming bit rate, start-up time and more.

ISP 🌲	# of tests 🗘	Start time [ms] \Rightarrow	Rebuffer rate [#] 🗢	Speed [Mb/s] =
Operator 1	16,370	3014	0.156	41.65
Operator 2	14,433	3208	0.237	30.309
Operator 3	7,024	3009	0.183	31.67

SP ≑	# of tests 🗢	Start time [ms] 🔷	Rebuffer rate [#] 审	Speed [Mb/s] 🕏
WIFI	26,946	3070	0.199	38.184
4G	8,971	3177	0.178	32.701
3G	2,609	3104	0.167	16.128
5G	4	1564	0	38.33

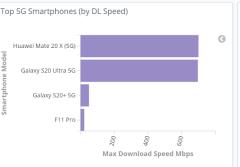

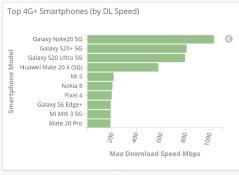

Device Information Dashboard

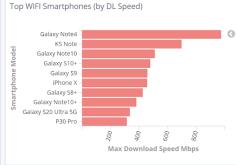

The Device Information dashboard contains information about devices that are in use for each operator as well as all the performance KPIs. Specific relevant device KPIs are:

- ✓ Model name
- ✓ Manufacturer
- ✓ OS version
- ✓ Platform (iOS/Android)
- ✓ Top 5G / 4G / Wifi smartphones

Users - OS Versions [Table]

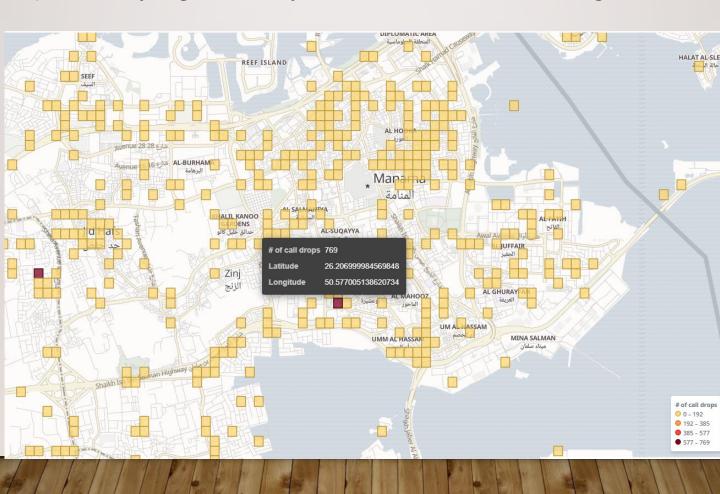

Users - OS Version	ns [Pie]

Voice Quality Dashboard

The Voice Quality dashboard shows the user issues visualized on a map to spot any areas where users are making calls and their quality is not satisfactory or calls are being dropped. In the example below we see two areas where the call drop is particularly high and may benefit from further investigation.

Data collection methodology

Our data is collected from end user devices running Android and iOS systems. All measurements are executed towards a CDN which has a large geographical footprint and hosts a significant part of the content that is being accessed by the users. This ensures our results are a good approximation of the user's actual quality of experience.

All measurements must contain accurate location information using GPS or wi-fi geolocation method. Measurements are considered only from the apps that have been approved by SpeedChecker. Submitted measurements are checked if they are within expected ranges and additional security precautions are implemented to ensure measurement data is not being manipulated.

The data collection process aims to deliver a single measurement sample from every device in our crowdsourcing system device pool and we strive to remove all duplicates. Due to privacy settings on some users phones we cannot reliably detect unique devices therefore some devices have contributed to more than 1 measurement into this dataset.

CONTACT US FOR MORE INFORMATION

Measurement methodology

The methodology is based on the concept of the ITU-T
Q.3960 (2016), "Framework of Internet related performance measurements" and "Supplement 71 to ITU-T Q-series Recommendations".

This test methodology aims at delivering an accurate measurement of the maximum bandwidth available over a given internet connection. This is achieved by transferring multiple parallel data streams over separate TCP connections within a predefined amount of time. The transferred data consists of randomly generated data with high entropy.

#	Parameter	Unit	ITU Range	Current Setting
1	Number of parallel threads	#	1 ≤ n ≤ 10	Dynamic addition from 1 to 10
2	Duration of pre-test	S	0 ≤ Tp ≤ 5	1s
3	Duration of the downlink test	S	5 ≤ Td ≤ 15	5s
4	Duration of the uplink subtest	S	5 ≤ Tu ≤ 15	5s
5	Number of 'pings' during delay subtest	S	5 ≤ p ≤ 20	p = 10
